

No more wimpy showers. No more shower complaints!

BrightWater uses patented vacuum - boosted valve technology to provide a shower so powerful no one is aware they are conserving water. Hotels love them and guests even ask if they can buy BrightWater showerheads!

BrightWater designs the only showerheads made to match the specific pressure and flow requirements. With a range to cover most applications – BrightWater also allows you to choose your own preferred flow rate and matches it to your water pressure.

BrightWater's patented Vacuum Flow™ Booster Valve technology is the only way to achieve "low flow" delivery in a showerhead without sacrificing the quality of the flow stream.

Tried, proven and tested in major sites around the world, where water is a valuable commodity!

SAVES £££

- reduced water costs
- reduced energy for heating water (hotel engineers estimate 75% guest room water requires heating)
- reduced electricity for pumping to high floors
- reduced sewerage effluent costs

Most customers achieve 100% ROI in less than 12 months
